1. Ramki's ask

Engagements or Programs for PLE (Consideration Set)

- Odyssey
- Quinto (*Lowest cost per Account in the world*)
- Skybridge
- ACE (Brown field)
- Agent fluency

1.1. Odyssey 2.0

- Cluster Spec v3
- Subscription Management Operators
- Tenant Developer Experience
- Bundle Factory - Custom Bundles
- Product Documentation
- Hub Adoption
- Externalize Artifacts from manifests
- Support for Tenant Artifacts (Tenant as a publisher - Payzapp, Optum examples)
- DDL, DML Operators
- Delta for Tenant Secrets
- Egress controls in Tenant Subscription Scope
- Vanity Domains in Tenant Subscription Scope
- Product Operations Center Adoption
- Pantheon Story

1.2. Cluster Deployment Descriptor (CDD 2.0) Adoption

- Product Monitoring Dashboards
- Indicators Threshold fine-tuning
- Deployment Runbooks
- Tenant Impact Validation

1.3. Quinto

- GraalVM and micro-vm readiness
- Tenant Isolated Databases
- Fix Logging, Metrics; Make traces usable
- Rebaseline deployments
- Remove unnecessary data

1.4. OMS Modernization

- Spartan Sidecar as an Envoy Extension (Reliable retries; Buffer and forward)
- GraalVM friendliness
- Cross region support
- Canary Deployment (Fine-grained Traffic shaping controls)
- Usable for any HTTP Traffic (Traffic management part)

1.5. Elenchos Dependencies

- Subscription Management 2.0
 - Deployment Operations Center
 - Each Product Deployment as a Workbench
 - Signals
 - Subscription Specification and Subscription Change Specification (Contract finalization) (Signals)
 - New Resource Requirements
 - Subscription Configuration Wizard & Agent
 - Export & Import Subscription Configuration
 - Subscription Import Agent (review imported config for compatibility; suggest parameters that need to be changed to make the config relevant for the accepting deployment/subscription)
 - Review and Refine Subscription Git folder structure (does it have Subscription Specification document - signed by Elenchos)
 - Subscription Lifecycle Notifications

- Implement Operators as Observable Workflows; Abandon Kubernetes style Operators;
 - Tenant Resources Operators
 - New Subscription Operator
 - Subscription Change Operator
 - Adopt Olympus Hub for Subscription Provisioning Workflow and Subscription upgrade workflows
- Deployment-centric Operations
 - Subscription association to a Deployment
 - Deployment Aging and Maintenance SLIs
 - Deployment Schleps, Reports, and Notifications

2. PLE Themes

2.1. Reduce Cost of Onboarding

2.1.1. All Product Lines

- Tenant Life cycle subscription management (onboarding of tenant and ongoing deployment updates for existing tenants)
 - Cluster spec and Operator adoption(across all services)
 - Configuration train for release promotion
 - Replace old unused flows (eg, there are newer version of services like Dia, Perseus that we need to use)
- Build – Run handover (evaluation criteria – no dev involvement in setup and deployment)
- Release process

2.1.2. Credit

-

2.1.3. CLM

-

2.1.4. Kernel

- CoA Segment creation

2.1.5. TaPS

-

2.1.6. DDA

-

2.2. Reduce Cost of Adoption

2.2.1. All Product Lines

- Comprehensive API Documentation
- Cookbooks

2.2.2. Credit

-

2.2.3. CLM

-

2.2.4. Kernel

- Dev Toolkit (Transaction Trace Viewer, T-policy simulator etc)
- Self-serve journey for defining new fees
- OOTB Provisioned Transactions/Voucher codes

2.2.5. TaPS

-

2.2.6. DDA

2.3. Reduce Cost of Operations

2.3.1. All Product Lines

- AI in SDLC
- Full stack engineering

- FE, BE, QA, InfoDev, Data (last one after platform and process maturity)
 - Bring data engineering to respective PLE
- Odyssey Completion
- Local testing
- CCE
- Log Optimization
- Externalise Workbenches – Segregation including Build Run handover

- Quality
 - Regression Suites, *Sanity Suite*, *Cluster Tests*,
Showroom stability – 7days zero s1/s2, 15 days zero s3

- Pre-Sales – always ready – state
 - Charter plan to take up all US presales (new GTM initiatives)
 - Will beef up the team as appropriate.

- Zero product and developer involvement in zone, tenant, product setups and deployments

- Define and improve the product line operation cost (i.e. per transaction cost / per account cost)

- Harness the earlier investment
 - Completion of Pantheon
 - Athens - go live
 - 1.1....1. Prepaid

- Measure and Enhance developer productivity
 - Number of PRs (with PR size / Complexity)

- Customer Support

- AI / Agentic support
- Symphony : incidents and support tickets
- Run Org
 - AI / Agentic run operations
- Audit

2.3.2. Credit

- Angelos forms for config screens

2.3.3. CLM

- Angelos forms for config screens

2.3.4. Kernel

- Observability and Education to observability (Deepsight)
- Backrub current (go live) and next set of activities (ledger, journal libraries, posting attributes storage optimization, system LTD summarization etc)
- Ledger mutations traceability via meta-postings

2.3.5. TaPS

- Observability and Education to observability (Deepsight)
-

2.3.6. DDA

- Consistency across the zone

Concerns/Challenges

- Team count and composition balance with SMEs,
- Tech/Process Efficiency,
- CP fallback on PLE continues

Capacity that we have for each SaaS – CS and SRE as well

Regular activity:

- PR reviews count from CP
- Count and time taken for Solution reviews from CP
- Pre-sales efforts – planned efforts to be applied (no constraints as on today)

Constraints and help required from Ramki

- Input on capacity planning – budget to be planned specific for PLE (no constraints as of today)
